

OneVue Sync™ Synchronized Clock Systems

The **OneVue Sync™** timekeeping solution provides synchronized clocks for hospitals, schools, businesses, transit centers, and other facilities to help everybody and everything stay on time.

But before that can happen, architects, engineers, and building planners must choose what in-facility technology to use for their building. That's why Primex strives to make it an easy decision, thanks to the following:

- Ready-to-use specification documents for each of the three Primex timekeeping technologies
- Accessible specification documents listed in MasterSpec
- A plethora of digital and analog clock options that will fit any customer's or facility's needs
- Free design evaluations from Primex experts

The OneVue Sync platform offers three different time synchronization technologies to support a wide range of applications and installations:

OneVue Sync Transmitter

A high-penetration 72 MHz frequency talks to devices throughout a building or campus with the option to leverage GPS- or NTP-acquired time.

OneVue Sync Bluetooth®

Clocks form a Bluetooth® Low Energy mesh network to transmit status and receive NTP time and other updates from the cloud-based OneVue software utilizing a OneVue Sync Bridge.

OneVue Sync PoE Network

Clocks connect to a facility's network via Ethernet to transmit data to and download settings from the cloud-based OneVue software and to obtain time from an NTP server.

Unrivaled Signal Strength

Signals from OneVue Sync easily pass through common building materials used in commercial construction

Customization

Custom dials are available for analog clocks to prominently display organization logos

Automatic Time Changes

OneVue Sync clocks automatically resynchronize after daylight saving time shifts and power outages

Power Options

Synchronized clocks can be powered by batteries, AC power, or through an Ethernet (PoE Network) connection

Interfacing with Other Systems

OneVue Sync clocks integrate with a variety of leading public address and life safety systems

Peace of Mind

OneVue Sync transmitters and clocks come with a 5-year standard warranty
